

GB-50

Item ref: 174.175UK

Gain Boost Pedal

User Manual

Caution: Please read this manual carefully before operating
Damage caused by misuse is not covered by the warranty

Thank you for choosing a Chord effect pedal to give your instrument a new sound dimension. Please read below for an explanation of the controls and to get the best results from your new effect.

Each Chord 50-series effect pedal is supplied with a 9V battery, which needs to be connected to the battery clip inside the underside battery compartment. Carefully remove the plastic cover by squeezing its clip and levering outwards. Clip back into place once the battery is fitted.

Controls and connections are described below.

1. Optional 9V DC jack power input
2. Effect on/off indicator
3. Low - adjusts the level of low frequencies (bass)
4. 6.3mm jack output - to amplifier
5. High - adjusts the level of high frequencies (treble)
6. Level - adjusts the output (boost) level
7. 6.3mm jack input - from guitar
8. Effect on/off footswitch

The GB-50 is a boost pedal that adds gain and output level to a signal, ideal for lifting the output during solos and/or for pushing the input of an amplifier to create overdrive. Increasing the Level control gives progressively more boost to the guitar output, whilst Low and High controls change the tonal character of the signal by adjusting the lower or higher frequency content. For boosting into solo passages, it is sometimes best to use this pedal in the send-return loop if the amplifier has one, whereas driving the amplifier into overdrive needs the GB-50 directly on the output of the guitar into the front end of the amplifier.

Unplug the guitar input jack to preserve the battery when not in use. If the pedal is not being used for long periods, it is advised to remove the 9V battery. Optional external power can be from a 9Vdc adaptor, centre-negative polarity with a rating of 100mA or higher recommended.

Disposal: The "Crossed Wheelie Bin" symbol on the product means that the product is classed as Electrical or Electronic equipment and should not be disposed with other household or commercial waste at the end of its useful life. The goods must be disposed of according to your local council guidelines.
